

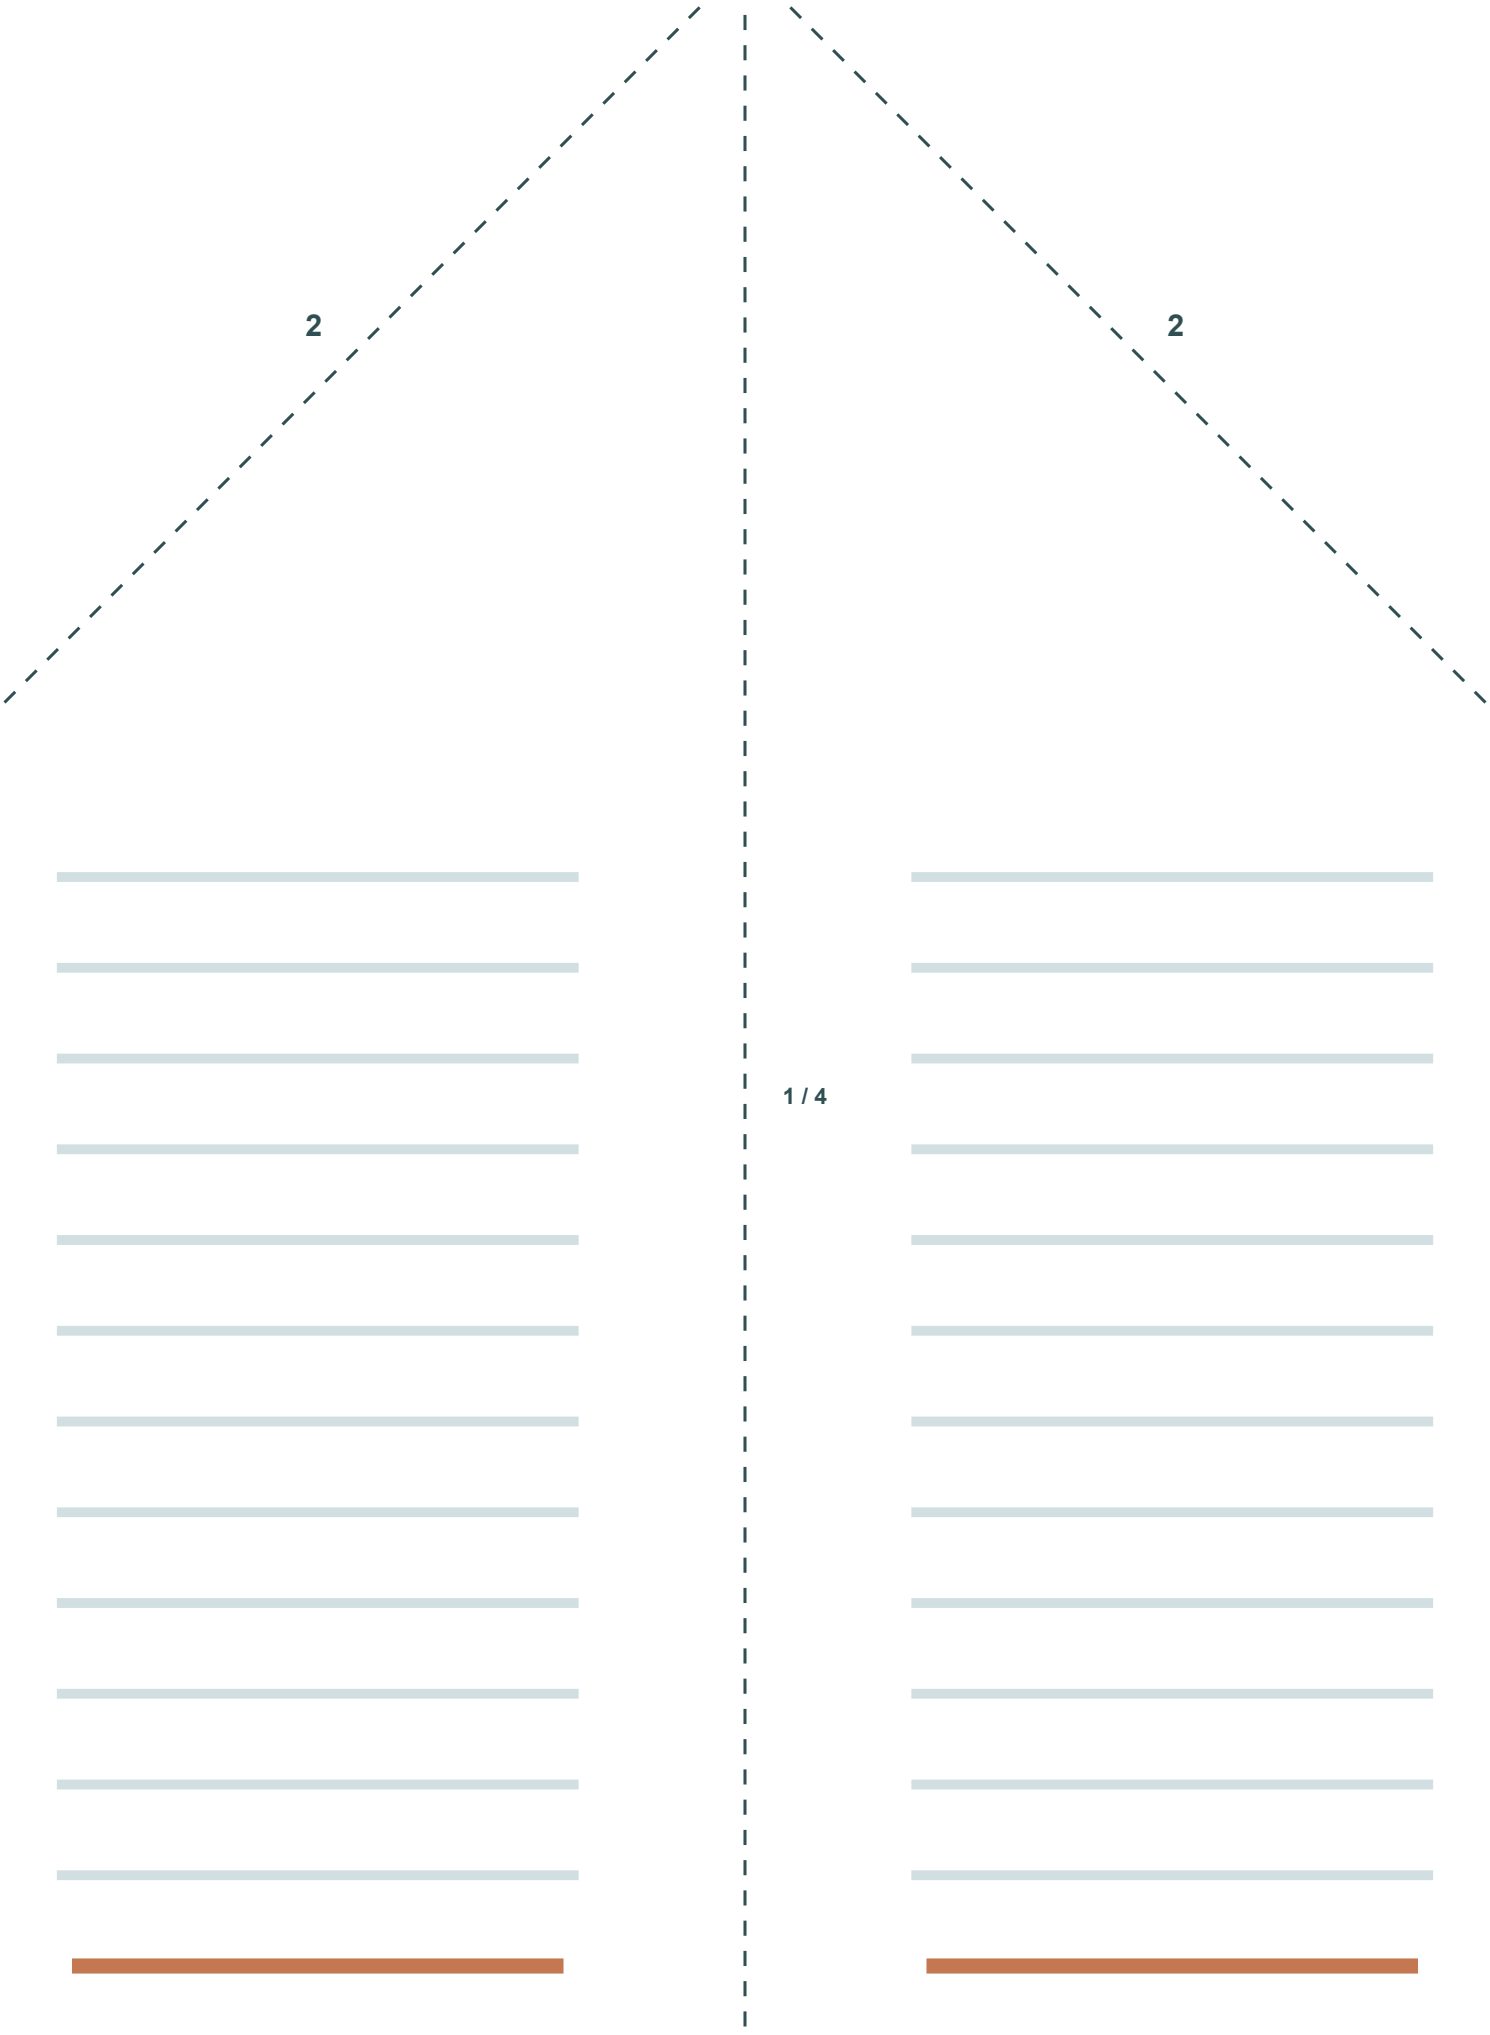
**PLAIN DART / PRINT FACE DOWN**

50 mm — check before folding



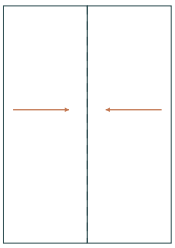
**STRIPED DART / PRINT FACE DOWN**

50 mm — check before folding

# Fold your A4 dart

Choose page 1 or 2: two printed styles of the same plane. Print on A4 at Actual size / 100%. Check the 50 mm line with a ruler. Use the whole sheet; do not cut it out.

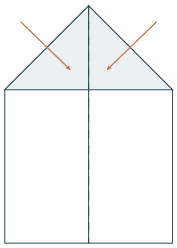
## 1. Crease and open



print face down

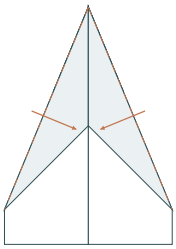
Put the print face down. Bring the two long edges together, press the centre crease, then open the sheet flat again.

## 2. Two corners in



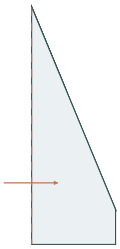
Bring each top corner to the centre crease. Match the edges neatly and press both diagonal folds.

## 3. Long edges in



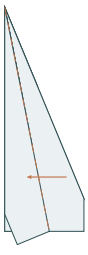
Fold each long sloping edge in to the centre crease. The nose stays at the top. Press the new folds flat.

## 4. Fold back



Fold the plane in half along its first crease, with the folded triangles on the outside.

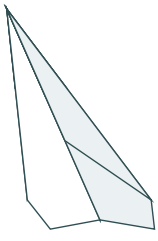
## 5. Make both wings



turn over; repeat on the other side

Fold one wing down so its long outside edge meets the straight folded base edge. Turn the plane over and make the other wing match.

## 6. Open the wings



matching wings; body underneath

Ease the wings open and give them the same slight upward angle. Hold the folded body underneath.

Dashed lines on the templates mark the first centre and corner folds. For the later folds, use the paper edges and these diagrams. Keep both sides as even as you can. Launch gently into a clear space, away from people and faces.
